Chris,
Good morning and Happy Friday.
Hope you are enjoying your time home tele-working.

I found out last night that you were asking for weights for all the shipments. I do have a report from USE for both facilities of what we shipped to them. I attached them for your reference. [REDACTED] also has these reports to check weights.

I saw the DWO this morning for this week.

The debris/soil estimate for property 3 is approximately 300+ yards. I calculated this from the map generated onsite of 3 areas identified. Total area ~18k sf and if we scrape 0.5 inches we are at 9k sf divided by 27 gives us ~300+ yards.

The debris (battery casings) should not be a problem. Some of the casing piles will need to be sized to <2.5 inches. Once this is done the material can be loaded out with the soil. As long as our truck loads are <50% debris we are OK.

There is other debris (white rolls of tubing?) that we would leave there or possibly send out in our trash dumpster if we identify it as NH. As far as the tires and other debris this will be your decision to remove. Alfred has been dropping off tires with no rims to a recycling spot in Volens. All metal would be set aside for recycling.

Could you please add hours on the DWO for the TDC to continue working on the RFQ for drums and totes. Thanks.

Please let me know if you need anything and the I apologize that ERRS communication (FCA/RM) was not current.

Enjoy the day and have a good weekend.
